

3.4.1 Extension activities are carried out in the neighbourhood community, sensitizing students to social issues, for their holistic development, and impact thereof during the last five years.

East Point College of Engineering and Technology has actively conducted extension activities within its local community over the past five years. These initiatives are designed to enhance students' holistic development and contribute positively to solve societal issues. Encouraging student participation in these activities not only enriches their educational experience but also fosters a strong sense of social responsibility and civic engagement.

The college collaborates with organizations such as the National Service Scheme and various clubs and societies to effectively implement these initiatives. This collaboration ensures better coordination and resource allocation for community outreach efforts, thereby maximizing their impact.

The activities undertaken include distribution of educational materials, first-aid training, awareness campaigns on menstrual hygiene, cleanliness drives at government schools, and initiatives promoting digital literacy and environmental conservation. Notably, students actively participate in Swachh Bharat initiatives by engaging in village cleaning drives, contributing significantly to public health and hygiene.

As part of their comprehensive development, students also engage in mentoring underprivileged students from local government schools on the career options available to them. This initiative provides academic support and fosters empathy and social consciousness among the student community.

Extracurricular activities organized through the clubs of our institute enrich our students as well, in developing empathy and understanding within them. These activities encompass sports events, cultural programs, workshops, and skill-building sessions, catering to diverse interests and talents in the neighbourhood.

The value education provided by the college through mandatory courses on Human values, Professional ethics, and Environmental studies, also helps our students to understand the society and contribute to its betterment.

During the COVID-19 pandemic, the college demonstrated proactive community support by organizing RT-PCR tests, vaccination drives, and distributing rations to ensure public health and well-being. These initiatives underscore the institute's commitment to collective responsibility and community welfare. East Point Group of Institutes has adopted 9 surrounding villages to offer health service regularly.

Regular activities organized by college and department clubs on social and environmental issues, such as seminars, tree plantation drives, and talks by social leaders, promote awareness and drive positive change. These initiatives empower students to engage with critical societal issues and become catalysts for positive transformation.

Through East Point College of Engineering and Technology's commitment to extension activities, the college continues to instil values of empathy, responsibility, and civic engagement in its students, preparing them to make meaningful contributions to society.
